## Analytical Problem Statement

In an email marketing campaign, there are 30,000 subscribers. Emails are being sent to all 30,000 subscribers but 4560 emails bounce back. Out of the remaining emails that are delivered 5000 do not open the emails and out of the rest 12,000 click on the promotional link present in the email. Calculate the “click rate” and “open rate?”

### Solution:-

Total Subscribers = 30,000

Bounced Emails = 4,560

#### Emails Delivered

Total Subscribers - Bounced Emails  
= 30,000 - 4,560 = 25,440

Emails Not Opened = 5,000

Emails Clicked = 12,000

**Open Rate** =  $(20,440/25,440) \times 100$   
= 80.35% approximately.

**Click Rate** =  $(12,000/25,440) \times 100$   
= 47.17% approximately.

# Thank you!
